
ABC ROLLERS

Running Out Roller **L5300/3**

The running out roller for installing insulated cable and consists of a plastic roller, a steel loop and a swiveling suspension hook.

The plastic roller is shaped to avoid any damage to the conductor bundle during running out. Maximum rated tension 15kN with safety hook.

*Designed for 4x95mm² and 4x150mm² Aerial Bundled Conductor

Roller Suspension Clamps

*Designed for 4x95 and 4x150 Aerial Bundled Conductor.

The big advantage of this product is that it can be used as a mounting roller and suspension clamp.

During the running out of the cable the unit is used as a mounting roller, the cable is clamped moving the clamping lever and the unit becomes a suspension clamp.

The suspension clamp with roller consists of strap, roller, pressure plates and a quick locking lever.

The roller is fitted with a special rubber insert and designed so that the conductor cannot jam when being used as a suspension clamp.

Should any further adjustment to the conductor be required the clamping lever can be released and the unit reverts back to a running out roller. Because of the easy handling of the clamp, without the need for tools, a considerable amount of time can be saved during installation.
